# **EDUCATION ACCESS & QUALITY**

#### **Health Literacy**

Health literacy is the degree to which individuals can obtain, process, and understand basic health information. Low health literacy is linked to poor health, higher rates of chronic disease, and higher mortality rates.

#### **Health Insurance Literacy**

Health insurance literacy is the ability to understand, choose, manage, and efficiently utilize health insurance plans. Health insurance literacy is crucial to affordable and effective healthcare decisions and outcomes.

#### **Digital Literacy**

Digital literacy is the ability to use information and communication technologies to find, evaluate, create, and communicate information, requiring both cognitive and technical skills.

# **INFECTIOUS DISEASES**

**COVID-19** is the disease caused by SARS-CoV-2, the coronavirus that emerged in December 2019. It was declared a pandemic on March 11, 2020 and cases continue to occur. The coronavirus can be spread from person to person and the best way to protect yourself is to get vaccinated and boosted when you are eligible, follow testing guidelines, wear a mask, wash your hands and practice physical distancing.

| ysical distancing.                   |                                      |

|-----|--|------------------|---------------|
|     | <b>Chlamydia</b> is a common sexually transmitted infection (STI) caused by bacteria. Chlamydia affects mostly young women, but it can occur in both men and women and in all age groups.  | 637 Cases        | 104,570 Cases |
| ~~~ | Infectious Syphilis is a bacterial infection usually spread by sexual contact. The disease starts as a painless sore — typically on the genitals, rectum or mouth. Syphilis spreads from person to person via skin or mucous membrane contact with these sores.  | 16 Cases         | 4,498 Cases   |
|     | <b>Hepatitis B (chronic)</b> is a serious liver infection caused by the hepatitis B virus (HBV). For some people, hepatitis B infection becomes chronic, meaning it lasts more than six months. Having chronic hepatitis B increases your risk of developing liver failure, liver cancer or cirrhosis — a condition that permanently scars of the liver. | 44 Cases         | 4,412 Cases   |
|     | <b>HIV</b> is a sexually transmitted infection (STI). It can also be spread by contact with infected blood and from illicit injection drug use or sharing needles. It can also be spread from mother to child during pregnancy, childbirth or breastfeeding.   | 11 Cases         | 4,708 Cases   |
|     | Acquired Immunodeficiency Syndrome (AIDS) is a chronic, potentially life-threatening condition caused by the human immunodeficiency virus (HIV). By damaging your immune system, HIV interferes with your body's ability to fight infection and disease.   | 9 Cases          | 1,860 Cases   |
